Question 1

Correct

Mark 10.00 out of 10.00

We define super digit of an integer x using the following rules:

Given an integer, we need to find the *super digit* of the integer.

- If x has only **1** digit, then its super digit is x .
- Otherwise, the super digit of x is equal to the super digit of the sum of the digits of x .

For example, the super digit of **9875** will be calculated as:

```
super_digit(9875)    9+8+7+5 = 29
super_digit(29)      2 + 9 = 11
super_digit(11)      1 + 1 = 2
super_digit(2)       = 2
```

Example

$n = '9875'$

$k = 4$

The number p is created by concatenating the string n k times so the initial $p = 9875987598759875$.

```
superDigit(p) = superDigit(9875987598759875)
               9+8+7+5+9+8+7+5+9+8+7+5+9+8+7+5 = 116
superDigit(p) = superDigit(116)
               1+1+6 = 8
superDigit(p) = superDigit(8)
```

All of the digits of p sum to **116**. The digits of **116** sum to **8**. **8** is only one digit, so it is the super digit.

Function Description

Complete the function *superDigit* in the editor below. It must return the calculated super digit as an integer.

superDigit has the following parameter(s):

- *string n*: a string representation of an integer
- *int k*: the times to concatenate n to make p

Returns

- *int*: the super digit of n repeated k times

Input Format

The first line contains two space separated integers, n and k .

Constraints

- $1 \leq n < 10^{100000}$
- $1 \leq k \leq 10^5$

Sample Input 0

```
148 3
```

Sample Output 0

```
3
```

Explanation 0

Here $n = 148$ and $k = 3$, so $p = 148148148$.

```
super_digit(P) = super_digit(148148148)
               = super_digit(1+4+8+1+4+8+1+4+8)
               = super_digit(39)
               = super_digit(3+9)
               = super_digit(12)
               = super_digit(1+2)
               = super_digit(3)
               = 3
```

Sample Input 1

```
9875 4
```

Sample Output 1

8

Sample Input 2

123 3

Sample Output 2

9

Explanation 2

Here $n = 123$ and $k = 3$, so $p = 123123123$.

```
super_digit(P) = super_digit(123123123)
                = super_digit(1+2+3+1+2+3+1+2+3)
                = super_digit(18)
                = super_digit(1+8)
                = super_digit(9)
                = 9
```

For example:

Input	Result
148 3	3
9875 4	8
123 3	9

Answer: (penalty regime: 0 %)

Reset answer

```
1 #include <bits/stdc++.h>
2
3 using namespace std;
4
5 string ltrim(const string &);
6 string rtrim(const string &);
7 vector<string> split(const string &);
8
9 /*
10  * Complete the 'superDigit' function below.
11  *
12  * The function is expected to return an INTEGER.
13  * The function accepts following parameters:
14  * 1. STRING n
15  * 2. INTEGER k
16  */
17 string concatenate(string n, int k)
18 {
19     string result = "";
20     for (int i = 0; i < k; i++)
21     {
22         result += n;
23     }
24     return result;
25 }
26
27 int superDigit(string n)
28 {
29     if (n.length() == 1)
30     {
31         return stoi(n);
32     }
33     int sum = 0;
34     for (char digit : n)
35     {
36         sum += (digit - '0');
37     }
38     return superDigit(to_string(sum));
39 }
40
41 int main()
42 {
```

```

43     ofstream fout(getenv("OUTPUT_PATH"));
44
45     string first_multiple_input_temp;
46     getline(cin, first_multiple_input_temp);
47
48     vector<string> first_multiple_input = split(rtrim(first_multiple_in
49
50     string n = first_multiple_input[0];
51
52

```

	Input	Expected	Got	
✓	148 3	3	3	✓
✓	9875 4	8	8	✓
✓	123 3	9	9	✓

Passed all tests! ✓

Correct

Marks for this submission: 10.00/10.00.

Question 2

Correct

Mark 10.00 out of 10.00

Find the number of ways that a given integer, X , can be expressed as the sum of the N^{th} powers of unique, natural numbers.

For example, if $X = 13$ and $N = 2$, we have to find all combinations of unique squares adding up to 13 . The only solution is $2^2 + 3^2$.

Function Description

Complete the `powerSum` function in the editor below. It should return an integer that represents the number of possible combinations.

`powerSum` has the following parameter(s):

- X : the integer to sum to
- N : the integer power to raise numbers to

Input Format

The first line contains an integer X .

The second line contains an integer N .

Constraints

- $1 \leq X \leq 1000$
- $2 \leq N \leq 10$

Output Format

Output a single integer, the number of possible combinations calculated.

Sample Input 0

```
10
2
```

Sample Output 0

```
1
```

Explanation 0

If $X = 10$ and $N = 2$, we need to find the number of ways that 10 can be represented as the sum of squares of unique numbers.

$$10 = 1^2 + 3^2$$

This is the only way in which 10 can be expressed as the sum of unique squares.

Sample Input 1

```
100
2
```

Sample Output 1

```
3
```

Explanation 1

$$100 = (10^2) = (6^2 + 8^2) = (1^2 + 3^2 + 4^2 + 5^2 + 7^2)$$

Sample Input 2

```
100
3
```

Sample Output 2

```
1
```

Explanation 2

100 can be expressed as the sum of the cubes of $1, 2, 3, 4$.

$(1 + 8 + 27 + 64 = 100)$. There is no other way to express 100 as the sum of cubes.

For example:

Input	Result
10 2	1
100 2	3
100 3	1

Answer: (penalty regime: 0 %)

Reset answer

```
1 #include <bits/stdc++.h>

4
5 string ltrim(const string &);
6 string rtrim(const string &);
7
8 /*
9  * Complete the 'powerSum' function below.
10  *
11  * The function is expected to return an INTEGER.
12  * The function accepts following parameters:
13  * 1. INTEGER X
14  * 2. INTEGER N
15  */
16
17 int powerSumUtil(int X, int N, int num)
18 {
19     int value = pow(num, N);
20     if (value == X)
21     {
22         return 1;
23     }
24     else if (value > X)
25     {
26         return 0;
27     }
28     else
29     {
30         return powerSumUtil(X - value, N, num + 1) + powerSumUtil(X, N,
31     }
32 }
33
34 int powerSum(int X, int N)
35 {
36     return powerSumUtil(X, N, 1);
37 }
38
39 int main()
40 {
41     ofstream fout(getenv("OUTPUT_PATH"));
42
43     string X_temp;
44     getline(cin, X_temp);
45
46     int X = stoi(ltrim(rtrim(X_temp)));
47
48     string N_temp;
49     getline(cin, N_temp);
50
51     int N = stoi(ltrim(rtrim(N_temp)));
52
```

	Input	Expected	Got	
✓	10 2	1	1	✓

	Input	Expected	Got	
✓	100 2	3	3	✓
✓	100 3	1	1	✓
